

BioMicroneedling Spicule Sponge Treatment Overview + Costs

BioMicroneedling Spicule Sponge Treatment Professional Only

Bio MicroNeedling is taking the Beauty Industry by storm, and we are in!

We offer a very easy, cost effective option for clinics to introduce this incredible modality into their clients skin journeys.

Bio MicroNeedling a pure, chemical free skincare procedure that is a natural needling procedure which encourages the skin cells to turn over + shed in 7 days.

It involves using tiny, natural freshwater sponge spicules to exfoliate the skin and stimulate collagen production. During the treatment, the spicules are applied to the skin in a gentle, massaging motion, helping to slough off dead skin cells and improve skin texture over the next 7 days.

Bio Microneedling treatments leave the skin healthier, more smooth + radiant, with minimal downtime.

We source our *99%PURE HYDROLYZED SPONGE SPICULE POWDER from a most reputable eco conscious supplier in the Ozarks and have put it together with the most incredible Australian Made + Manufactured Products.

BioMicroneedling Spicule Sponge Treatment

A great alternative treatment for the regeneration of skin, without the use of chemicals, trauma, heat, needles or numbing, with very little downtime.

Although an incredible stand alone treatment, it can also be very successfully incorporated with other chosen modalities, to maximise clients results.

Cosmetic grade Sponge Microneedles are a naturally derived ingredient from fresh water sponges (Phylum Porifera).

The slender needles of the sponge range in size from 20-200um and can penetrate deep into the stratum corneum and epidermis. Sponge Microneedles activate the epidermis microcirculation and helps deliver active ingredients deep into the skin.

Studies show as much as a 3000% increase in the penetration of actives into the target area with gentle circular motions.

Does one experience any downtime?

For approximately one week following the procedure, the skin will undergo a renewal process, lightly shedding its dead outer layer.

Depending on the skin, your client may or may not experience shedding.

If peeling occurs, it usually begins 2- 4 days following the treatment and lasts for approximately three days.

In addition, your client may experience mild itching, dryness and redness - easily relieved + quickly subsides.

BioMicroneedling Spicule Sponge Treatment

Sponge Microneedles can help improve the penetration of active compounds that treat acne and help to clear pores and reduce pore size.

It can also help with stubborn blackheads and help to control excess sebum.

Skin Benefits:

- Anti-aging
- Scar Reduction
- Skin Renewal
- Penetration Enhancer
- Gentle Peeling
- Improved Microcirculation
- Acne Management

Each session takes 30 - 45 minutes including: Cleanse, after which a mixture of HydraDrench Pro Mist + Sponge Spicule powder is brushed or syringed onto the skin.

A gentle, light massage embeds the spicules into the skin after which a Soothe + Infuse HA, B3 + 5 Sheet Mask is applied and left on for 10 -20 minutes.

We finish with the application of Think Zink Moisture + Protect from the treatment pack, and give them the leftover to take home and use for 2 days

A complimentary Follow up facial + review is recommend 4 weeks after the last treatment in the series.

BioMicroneedling Spicule Sponge Treatment

Add on / Variations:

SRA Skinfusion Vit. A, B or C treatments may be added to the mixture according to skin type and concerns.

SRA BioMicroNeedling and SkinFusion Treatment may be combined with the Profosma Jet Plasma modality to maximise absorption.

NOTE: We strongly recommend that clients undergoing any of the above treatments need to start prepare + use from 2 weeks before 1st treatment our **SRA Pre / Post Procedure Packs (lasts up to 4 weeks)**

BioMicroneedling Spicule Sponge Treatment
